

OUR STANDARDS KEEP US IN GOOD COMPANY

Norandex is proud to be among the select group of companies whose vinyl siding brand has passed the high standards implicit in the International Organization for Standardizations ISO 9001-2000 Quality Management requirements.

ISO 9001-2000 is a series of quality management standards developed by the International Organization for Standardization (ISO), a network of national standards institutes based in Geneva, Switzerland. This group represents the national standards organizations of nearly 150 countries. Norandex is one of only a handful of companies that has had its vinyl siding brand registered for compliance with ISO 9001-2000 standards.

UL-LABORATORIES.

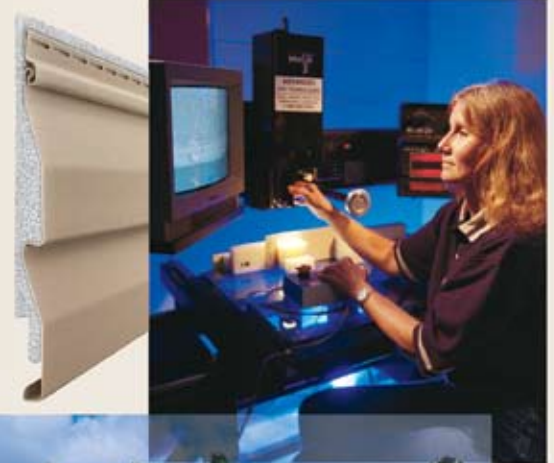

Underwriters Laboratories (UL) is North America's foremost product safety certification organization, and the leading quality system registrar in the United States. In pursuit of ISO 9001-2000 registration, UL audited the plants that manufacture Norandex vinyl siding to assure complete compliance to ISO standards. UL registration is difficult to get, and difficult to maintain. Systems are inspected every six months to insure that standards remain in compliance. Norandex brand vinyl siding products are unique because they have ISO 9001-2000 registration through Underwriters Laboratories, and carry the GOOD HOUSEKEEPING Seal.

WHAT THIS MEANS TO YOU.

Inefficiencies in manufacturing can result in increased product costs. Compliance with ISO 9001-2000 standards helps to assure superior productivity, timely delivery, and equitable pricing.

So, when you purchase a Norandex vinyl siding product, you get what you pay for—and more.

We promise to always set our standards high in order to help you reach the goals you've set for your business. ISO 9001-2000 registration through Underwriters Laboratories is tangible proof that we're keeping that promise.
